

Working with ease... Safe - Productive - Efficient

## The safest, most efficient way to handle pallets.

### This is “the better way”

You knew there had to be a better way, right?

The patent pending **Pallet Return Device** gives you a perfect stack every time with less strain on your back and a lower risk of falling pallets.

The **PRD** mounts to your existing pallet fork rails in picking modules and doesn't use any external electricity or compressed air. This unique system can handle wood or plastic pallets simultaneously and be retrofitted to any facility. See how the **Pallet Return Device** can save you labor costs and time, while providing that perfect stack every time.

### The Process

The operator manually loads the tilted carriage & when full releases the tilted load & lets a shock absorbing device guide the load to a vertical (unload) position. The pallets are then rolled forward to a raised outbound location which releases the pallets from the carriage, ready for the forklift to retrieve, squarely stacked pallets. The operator then slides the carriage back, tilts it back to the load position and it is now ready to receive more empty pallets. The device creates a perfect stack every time, eliminating the need for forklift drivers to reshape stacks.

# Working with ease... Safe - Productive - Efficient

“No more worries from twisted or bad stacks getting hung up on the rack frames...”

## FEATURES

- Pallet carriage tilts **backward** making loading safe & easy.
- Designed to **straighten** each pallet that is loaded.
- **Pallet release stops [A]** allow for use with wooden and plastic pallets.
- Easy-to-use **hand and foot releases**.
- **Solid wheel [B]** for the first receiver roller withstands impact of pallets.
- **Shock absorbing device [C]** safely tilts carriage when unloading.
- **Raised receiving end** lifts pallets off the carriage for easy resetting.
- **UHMW wear pads** prevent metal-on-metal contact.
- Recessed **bilingual safety label** clearly explains proper loading method.
- **Optional flashing strobe** alerts forklift driver a full stack is ready for pickup.\*
- Constructed with long-lasting, powder-coated **heavy gauge steel**.

\* Strobe requires 24V AC

## BENEFITS

- **Ergonomic Advantage.** An easier way to handle pallets that reduces the risks of stacking.
- **Efficiency Advantage.** Saves time when handling pallets — reworking the stacks is no longer required.
- **Retrofittable.** Designed to fit your needs and customizable to fit your current or future work center.
- **No Energy Required.** Energy cost effective with no outside source of energy needed.

**Eliminate the hassle. Get a perfect stack every time.**
