

Dock Safety Equipment

Smart Strap™ Dock Barrier

The Safety Strap replaces the signal function of the dock door opening and closing when the facility operates with the loading dock doors open. It is a high visibility, yellow, dock barrier that helps prevent dockworkers from falling off a loading dock.

High strength durable nylon strap is retractable to keep clear of door opening when not in use.

When supplied with optional proximity sensor, the Safety Strap can be incorporated with our Smart Chock & Safety Signal dock communication systems, or used as a stand-alone unit. Suitable for doors with openings up to 3000mm.

Code **M200** with proximity sensor
Code **M201** without proximity sensor

Multi Chock™ Truck Restraint

Optimum loading bay safety!

Transhipments in loading bays all too frequently result in accidents and damage. As a consequence, to ensure optimum safety we have developed an automatic locking system for vehicles while they are loading and unloading. Multi Chock offers total reliability and eliminates any risks as regards people, property or equipment.

Code **MDMC**

Simple to use:

- We have developed a simple automatic locking procedure - when the dock is open, the chocks are raised. With the wedges in the raised position the vehicle is immobilised. When the dock is closed, the chocks are lowered!
- Once the transhipment operation is finished, the fork-lift driver closes the dock and lowers the chocks, allowing the vehicle to move away.
- All steel components are hot dip galvanised.
- Multi Chock immobilises all vehicle types:
The chocks are high enough to hold a truck even at full power, vehicle accessories (mudguards, anti-spray devices, etc) do not in any way affect their operation.
- The simple, reliable, maintenance-free system!

**SIMPLE – NO MAINTENANCE
– WORKS WITH ALL TRUCK TYPES**

Moulded Polyethylene Wheel Chocks

Oz Chocks are indispensable at dock, ramp maintenance and loading areas for the safe parking of mobile equipment. Oz Chocks range in size from small to large to accommodate all vehicle types up to and including mining haul trucks & equipment. They are safe, heavy duty, durable, high impact resistant, lightweight, UV stable & come with a moulded handle and rubber traction pad. Oz Chocks made from highly durable polyethylene & supplied in safety yellow.

MFSP155 is a giant chock for large machinery
