

# FORKLIFT MOUNTED SWEEPER

**Simply by pushing this sweeper with a forklift, you can efficiently sweep wide spaces such as floors, parking areas and warehouses.**

- The Yuso sweeper is a wide area sweeper that mounts on a forklift truck.
- It quickly sweeps large areas as it is pushed along by a forklift truck.
- It requires no electricity or other power source.
  - The brushes and dust collection fan are driven by traction wheels.
- Mounts easily on your current forklift.
  - For compatible forklift trucks, refer to the specifications.
- Gather-up brush for dust collection.
  - The ample sweeping width of 1500mm provides greatly increased sweeping capacity.
- These time-saving and labour-saving devices can quickly sweep vast areas.
  - Sweeping capacity is approx 7,500 square metres per hour (At a forklift speed of 5km per hour)
- A built-in dust collecting fan and heavy-duty dust filter minimise dust dispersal.
  - Airborne dust (powdered dust particles) is minimised during sweeping.
  - The sweeper is equipped with a filter cleaning mechanism that prevents clogging of the filter surface. Simply turn a wheel to clean the filter and maintain the effectiveness of the dust collector.
- Dust disposal is a breeze
  - Simply lift the sweeper with the forklift and move it directly to the dust disposal site.
  - Just pull the attached rope to open the lid of the dust box. The lid closes automatically when the unit is lowered.
- Designed for easy maintenance.

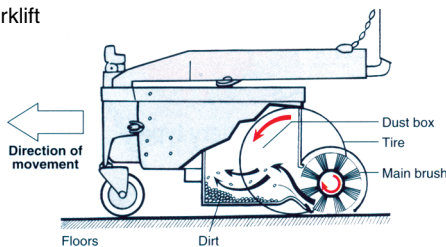

**Lower initial cost than automatic-type sweepers.**

Compared to conventional self-driven sweepers, this model is amazingly economical. What's more, operating costs are a fraction of those of a conventional sweeper.

## Model MST1501DC

With a sweep width of 1.5 metres, the Model ST-1501DC quickly and effectively handles sharp turns.

The main brush collects dust by drawing sand and refuse into the dust box.

|-----------------------------------|--|
| Model No                          | <b>MST1501DC</b>   |
| Unit Operation                    | Driven by forward motion of the forklift                 |
| Brush & Dust Collection Fan       | Forward motion of the forklift drives the brush rotation |
| Sweeping Width                    | 1,500mm  |
| Sweeping Capacity (Cleaning Area) | 7,500m <sup>2</sup> /h at a driving speed of 5km/h       |
| Dust Collection Filter            | Dust collection filter with filter shaker handle         |
| Dust Box Capacity                 | 20 litres  |
| Width                             | 1,500mm  |
| Length                            | 1,180mm  |
| Height                            | 640mm  |
| Weight                            | 130kg  |

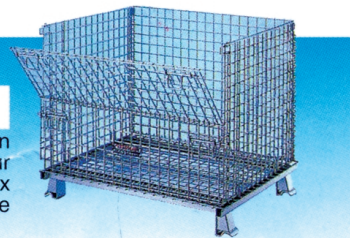

### Convenient standard equipment

In addition to the other standard accessories, the Model ST-1501 DC is available with a box pallet and exclusive garbage bags.

### Box pallet

Provided as standard equipment with Model ST-1501DC

This unit is packaged for delivery in a box pallet. When fitted with our exclusive garbage bags, the box pallet can be used as a large garbage box.

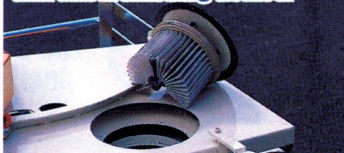

### Gather-up brushes

Sweeping operation is highly efficient because dirt and dust are gathered toward the middle. The sweeping mechanism is effective at gathering up dirt and dust that collect near walls and fencing.

### Dust collecting fan with filter and dust removing device.

The dust collection fan, powered by means of a mechanical interlock with the wheels, reduces the amount of dust stirred up. The included cartridge filter is equipped with a dust flap lever to limit any loss of vacuum efficiency.

### Exclusive garbage bag

Provided as standard equipment This exclusive garbage bag for the optional box pallet is made of strong blue sheeting. Note: Photo shows optional parking step installed.
