Safety Features

Pressing one of the five E-Stops ceases machine motion. Must restart from remote panel.

Hand sensor located on Rotary Handle must be activated for controls to work.

Pressure Sensing Safety Mats stop the machine when activated.

The operator must stand on the Operator Pressure Sensing Mat to operate the machine.

Front Sensing Edge stops forward motion when activated.

LED Light provides workers with much needed light in the container.

Productivity

It is common for a single worker on a Destuff-IT™ to achieve a case rate in excess of 900 boxes per hour, depending on the size and weight of the box. Whether handling a single SKU or dozens, the Destuff-IT™ aids in getting boxes to the dock area for sorting and palletising in an efficient manner.

Whether the objective is to reduce injury or improve productivity, the Destuff-IT™ is an excellent solution. With proven productivity gains that reduce unload time, eliminate demurrage, standby and drop trailer charges; the Destuff-IT™ can also reduce the number of doors needed for the unload operation with more trailer turns per door.

- **Increase Throughput** - Destuff-IT™ operators unload containers up to 50% faster than the traditional step stool method.
- **Reduce Man Hours** - DCs and 3PL operations using a Destuff-IT™ have reported significant reductions in overtime charges typically realised during seasonal peaks.
- **Improve Dock Utilisation** - By bringing the palletising function onto the dock, workers are able to sort multiple SKUs as the product travels down the conveyor.

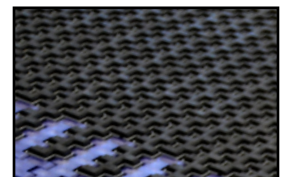

Destuff-IT™ and Restuff-IT™ Configurations

Destuff-IT (DTU)	Restuff-IT (DTB)
Unloads	Loads and Unloads
Conveyor runs in one direction	Conveyor runs bidirectional
Reduces unload cost	Reduces load and unload cost
Standard and optional safety features	Standard and optional safety features
Ergonomic	Ergonomic
Reduces workplace injury	Reduces workplace injury

Gravity Skate Wheels on Destuff-IT™ configuration (DTU)

Rear Modular Belt on Restuff-IT™ configuration (DTB)
