

PALRING SPECIFICATIONS

Palring Turntables are a simple aid to safer manual handling and eliminate the need for stretching when loading or unloading products. They are ideal for areas where more complex lifting equipment can't be used.

If you don't have the need to raise or lower a load, but would like to rotate it for easy access to all sides, turntables are ideal. Turntables decrease the amount of time workers spend walking around a pallet and reduces the stretching that can cause injury. Two different turntables, both having a capacity of 2000 kg.

Features:

- Light, galvanised for those with forklifts readily available
- Easy to move; internal carry handles for easy relocation
- Maintenance free
- 2 Tonne Capacity
- Two sizes: 900 mm and 1100 mm diameter
- Galvanised finish for extra durability
- Easy to rotate - won't bind or tighten under load

Specifications:

| | |
