

PRESTAR PLATFORM TROLLEYS SPECIFICATIONS

PRESTAR POINT OF DIFFERENCE

The Prestar business is platform trolleys. Made in Japan, their focus, design and attention to detail is catalyst for making this product range the world leader. Producing trolleys to be proud of, end users are guaranteed to be satisfied.

Each model in the extensive line-up is carefully built to the highest standards. Every single day, in workplaces all over the world, customers depend on Prestar trolleys as indispensable partners.

If you are serious about moving product with style and absolute ease, Prestar should be your preference.

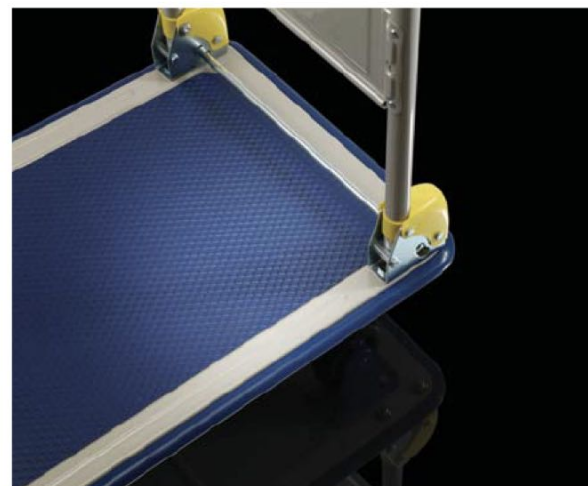

OUTSTANDING QUALITY

Prestar platform trolleys are a superior option. The platform is double pressed metal, and the handles are thick robust tubing. This creates superior strength allowing it to keep shape. It won't bow, bend or fail.

The pedal / hinge mechanism on the handle is of premium quality. It is light, durable and reliable. These components have a guard protecting the pinch point and keeping the components clean.

The Prestar matting and bumpers are machine fitted, as a result they remain fixed to the surface of the trolley and do not peel. Regardless, if trolley is under load or empty the user's push effort is lowest with Prestar.

INNOVATIVE WORKMANSHIP

Being Japanese designed and built, the highest quality materials and components are used. Supporting the confidence in Prestar quality, all products have a 5 year manufacturer's warranty, for additional safety and dependability.

Meticulous with performance, Prestar even design and manufacture their own castors. Each product model includes castors tailor-made to suit the trolley and meet performance expectations. The castors have sealed precision bearings and are batch tested to ensure manufacturing standards. The result is a smooth rolling and quiet product.

Brake Trolleys

Prestar understands the importance of brake options on platform trolleys and that situations have different brake requirements. Prestar have developed a number of options.

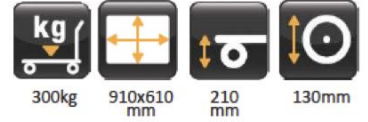

Safety Handbrake Models

The brake engages when the handle is released. Without the lever on the handle depressed the trolley will not move. Available on 2 models. This item cannot be retrofitted.

BNF301HB Folding Handle

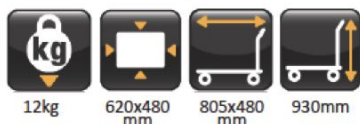

BNF307HB Fixed Handle

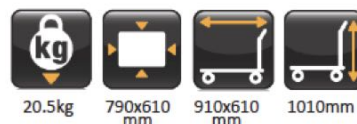

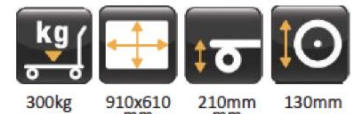

Dead Man Brake Models

Releasing the hand lever applies the brake either partially or fully to slow down or stop the trolley. This is useful when moving up or down sloping surfaces.
