

SOLAR LADDER LIFT

Solarlift gently transports sensitive solar elements and photovoltaic modules quickly and safely to the roof.

The specially designed solar platform ensures careful transport of the valuable modules and holds the sensitive cargo safely in place.

The Solarlift also scores when it comes to transport and storage. It can easily be transported to its deployment site as the components can be dismantled into individual pieces. Once at the construction site, the device impresses with quick and easy assembly without additional tools and the small size of the compact base unit means that it can be installed even at sites with **difficult** access conditions.

The load capacity in each case depends on the design of the aluminium ladder sections, the inclination and the rail length.

Technical Data:

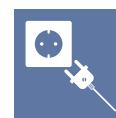

250 kg

30 m/min

19 m
max

1.3 kW
240 V
50 Hz

MHSL Solar Package

Article # Description

- 1 x 02032 Base Unit
- 4 x 02888 Ladder section 2 m
- 1 x 02889 Ladder section 1 m
- 1 x 02877 Angle track section
- 1 x 02893 General purpose platform
- 1 x 02906 Solar Platform
- 1 x 02826 Roof Tie
- 1 x 02886 Transport axle
